Dade. 1650.

A Description of the foure quarters of the Yeare.

And first of the Winter.

Sol in ♍. ♎. ♏.

Winter Quarter (after the Astronomers accompt) began the 11. day of *December*, 1649. and continueth until the 10. day of *March* this yeere 1650. So that alwaies the first part of the Astronomicall Winter is in one Politique yeere, and the latter end thereof is in the other; at which time was the shortest day of the yeere, by reason of the Suns greatest declination from the Equinoctial Line.

This season of its own natural disposition is known to be cold and moist, contrary to the quality of Summer: And in this quarter the inward parts of man are very hot, & being healthful, may receive plenty of Food; because natural heat is now comforted, and is gone inward, and there increased, and maketh digestion the better.

How the weather wil be therein disposed, is noted for each day throughout the quarter.

The sicknesses that accompany this quarter,
B 2 where-

wherewith many wil be grieved, are these, and such like, namely, pain in the Stomack, Laskes of sundry sorts, the Cholick and Illiack-Passion, Falling-sicknesse, and Swownings, diseases proceeding of rottennesse, and corrupt humors, Coughes, thin Rheumes, Head-ach, with other infirmities.

Of the second quarter of the yeare, called the Spring.

Sol in γ 8. II .

THe Sun having fully finished the Winter quarter with the last part of *Pisces*, beginneth the Spring the tenth day of *March*, the Sun entring into the first minute of *Aries*, the Equinoctiall Signe, and maketh the day and night of equal length, and continueth until the 11. day of *June*.

This season of his natural quality is hot, and moist temperately, and likewise very healthful, and is therefore accounted the fittest time in the yeare to ease diseased bodies in, and to restore health againe in those in whom formerly it hath been decayed by any kinde of evacuation.

The

Dade 1650.

The particular condition thereof, may be seen in the daily disposition of the season.

The Sickneses of this quarter are, Melancholly, Madnesse, the Falling-sicknesse, bleeding at the Nose, Hoarsenesse, Coughes, Itch, Scales, many Ulcers, and small Apostumes, the Gout, and pain in the Joynts, Plurisies, Dropsies, pestilent Agues, shortnesse of Breath, Faintings, pain in the Head, Eyes and Stomack, rotten Fevers, new Agues, and other strange Diseases.

Of the third quarter of the Yeare, called Summer.

Sol in ☊. ♋. ♎.

THe third part of the Yeare Astronomical, called the Summer quarter, taketh alwayes its beginning at the Suns entrance into the first degree of *Cancer*, which is the 11. of *June*: at which time he maketh his greatest declination toward the North from the Equinoctiall, and causeth the longest day, and shortest night in the yeare; and so Summer holdeth on till the 13. of *September* following.

The predominant qualities of this Season (according to its proper nature) are heat and

A Prognostication.

drinesse, spreading them abroad in each part of the body.

As for the Disposition of the weather, you may see in the daily inclination.

The Sicknessees at this time are divers, as burning Agues, Plurisies, Frensies, hot Apostumes, divers paines in the Head, sundry Inflammations, and new infirmities, proceeding especially of hot cholerick Humors, wherewith many will be sore vexed.

Of the fourth quarter of the Ycare,
called *Auranne*, or fall of
the *Leafe*.

Sol in \approx m. 7.

THe Harvest quarter, (or fall of the Leafe) beginneth at the time of the Suns departure from the last scruple of the 30. degrees of *Virgo*, into the first minute of the second Equinoctial signe *Libra*, being the 13. day of *September*, and doth last until the 11. of *December*, when the Sunne shall enter into *Capricorne*.

This Season is naturally inclined to be cold and dry, yet it is evermore disposed to be unconstant

Dade 1650.

constant and variable, by meanes whereof it is the nurse of most sicknesses hapning in the Spring.

And how the Aire is like to be inclined throughout all Harvest, may be seen in the daily disposition of the Season.

The Diseases and Sicknesses most like to molest people this quarter, are these and the like, as namely, Opelations in the Spleen, Costiveness, shortnesse of Breath, fretting in the Bowels, Falling-sickness, and many other melancholy effects, pain in the sides, as Stiches, and Cramps, Convulsions, Dropsies, Sciaticas, the Stranguary, Cholick, and many more.

Of two Eclipses of the Moone to be seen in England this year

1650.

THE first Eclipse of the Moon is upon the fifth day of May, about three quarters of an houre past seven of the Clock at night; at which time you may (if Clouds hinder not) see the Moon rise in the South-east, above halfe Eclipsed.

The other Eclipse of the Moone is upon
B 4 the

the 29. of October, about a quarter of an hour past seven a Clock in the Morning, the Moone being then in the West, just halfe darkned, and sets presently after, before she can recover all her light.

The next yeare there wil be no Eclipses seen, but the yeare after that, viz. 1652. wil present a partill one to our view, on the 5. of *May* at 7. houres 46. min. after Noon; and the same moneth will produce such a terrible Eclipse of the Sun on the 29. day at 9. ho. 47. 33. A. M. as this Age cannot parallell: for at the time of greatest obscurity, the Sun shall be darkned no lesse then 11. Dig. 53. min. 41. sec. according to *Practicall Astronomy*, lately published.

Here followeth certaine Physicall verses, with the daily inclination and disposition of the weather, the New, Full, and Quarters of the Moon.

Also short Rules for Husbandry for every Moneth throughout the year.
